WHO Guidance

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

Health grounds shall reflect WHO's definitions of health, which entails a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity. Abortion Care Guideline § 2.2.2.

Source document: WHO Abortion Care Guideline (page 16)
Grounds-based approaches to restricting access to abortion should be revised in favour of making abortion available on the request of the woman, girl or other pregnant person. The Abortion Care Guideline recommends against laws and other regulations that restrict abortion by grounds. The guideline recommends abortion be available on the request of the woman, girl or other pregnant person.

Until they are replaced with abortion on request, any existing grounds should be formulated and applied in a manner consistent with international human rights law. This requires that abortion is available when carrying a pregnancy to term would cause the woman, girl or other pregnant person substantial pain or suffering, including but not limited to situations where the pregnancy is not viable. Grounds-based approaches that require fetal impairments to be fatal for abortion to be lawful frustrate providers and leave women no choice but to continue with pregnancy. Being required to continue with a pregnancy that causes significant distress violates numerous human rights. Abortion Care Guideline § 2.2.2.

Source document: WHO Abortion Care Guideline (page 64)

Laws or policies that impose time limits on the length of pregnancy may have negative consequences for women, including forcing them to seek clandestine abortions and suffer social inequities. Safe Abortion Guidelines, § 4.2.1.7.

### Authorization in specially licensed facilities only

- **Yes**

- **Related documents:** Sao Tome and Principe Penal Code (page 40)

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

Third-party authorization requirements are incompatible with international human rights law, which provides that States may not restrict women’s access to health services on the ground that they do not have the authorization of husbands, partners, parents or health authorities, because they are unmarried, or because they are women. The Abortion Care Guideline recommends that abortion be available on the request of the woman, girl or other pregnant person without the authorization of any other individual, body or institution. Abortion Care Guideline § 3.3.2.

- **Source document:** WHO Abortion Care Guideline (page 81)

If the abortion is taking place after 12 weeks, a doctor in addition to the doctor who is performing the procedure must verify that the grounds obtain in line with the law.

- **Additional notes**

**Judicial authorization for minors**

- **Not specified**

When there is no explicit reference to an issue covered in the questionnaire in the relevant document(s), this is noted and no interpretation was made.

- **Related documents:** Sao Tome and Principe Penal Code

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

Judicial authorization in cases of rape

- Not specified
  When there is no explicit reference to an issue covered in the questionnaire in the relevant document(s), this is noted and no interpretation was made.

**Related documents:**
- Sao Tome and Principe Penal Code

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

There shall be no procedural requirements to “prove” or “establish” satisfaction of grounds, such as requiring judicial orders or police reports in cases of rape or sexual assault (for sources to support this information). These restrictions subject the individual to unnecessary trauma, may put them at increased risk from the perpetrator, and may cause women to resort to unsafe abortion.

The Abortion Care Guideline recommends abortion be available on the request of the woman, girl or other pregnant person. Abortion Care Guideline § 2.2.2.

- Source document: WHO Abortion Care Guideline (page 64)

**Additional notes**

There must be proof of a criminal act but the Penal Code does not specify whether this should be a police complaint or a judicial authorisation.

Police report required in case of rape

- Not specified
  When there is no explicit reference to an issue covered in the questionnaire in the relevant document(s), this is noted and no interpretation was made.

**Related documents:**
- Sao Tome and Principe Penal Code

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

The Abortion Care Guideline recommends abortion be available on the request of the woman, girl or other pregnant person. Abortion Care Guideline § 2.2.2.

- Source document: WHO Abortion Care Guideline (page 64)

**Additional notes**

There must be proof of a criminal act but the Penal Code does not specify whether this should be a police complaint or a judicial authorisation.

Parental consent required for minors

- Yes

**Related documents:**
- Sao Tome and Principe Penal Code (page 40)

**Can another adult consent in place of a parent?**

- Yes

  In the case of girls under the age of 16 or unable to provide consent, consent can be provided by a husband, partner (if not married), legal representative, parent or next of kin.

  - Sao Tome and Principe Penal Code (page 40)

**Age where consent not needed**

- 16

  In the case of girls under the age of 16 or unable to provide consent, consent can be provided by a husband, partner (if not married), legal representative, parent or next of kin.

  - Sao Tome and Principe Penal Code (page 40)

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

While parental or partner involvement in abortion decision-making can support and assist women, girls or other pregnant persons, this must be based on the values and preferences of the person availing of abortion and not imposed by third-party authorization requirements. Third-party authorization requirements are incompatible with international human rights law, which provides that States may not restrict women’s access to health services on the ground that they do not have the authorization of husbands, partners, parents or health authorities, because they are unmarried, or because they are women. The Abortion Care Guideline recommends that abortion be available on the request of the woman, girl or other pregnant person without the authorization of any other individual, body or institution. Abortion Care Guideline § 3.3.2.

Clinical and Service-delivery Aspects of Abortion Care
National guidelines for induced abortion

WHO Guidance

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

National standards and guidelines for abortion care should be evidence based and periodically updated and should provide the necessary guidance to achieve equal access to comprehensive abortion care. Leadership should also promote evidence-based SRH services according to these standards and guidelines. Abortion Care Guideline § 1.3.3.

Source document: WHO Abortion Care Guideline (page 50)

Vacuum aspiration
No data found

Dilatation and evacuation
No data found

Combination mifepristone-misoprostol
No data found

Misoprostol only
No data found

Other (where provided)
No data found

Vacuum aspiration is recommended for surgical abortions at or under 14 weeks to be provided by traditional and complementary medicine professionals, nurses, midwives, associate/advanced associate clinicians, generalist medical practitioners and specialist medical practitioners.

The Abortion Care Guideline recommends against the practice of dilatation and sharp curettage (D&C), including for sharp curette checks (i.e. to "complete" the abortion) following vacuum aspiration. Abortion Care Guideline § 3.4.1.

Source document: WHO Abortion Care Guideline (page 101)

Dilation and evacuation (D&E) is recommended for surgical abortions at or over 14 weeks to be provided by generalist medical practitioners and specialist medical practitioners. Vacuum aspiration can be used during a D&E. Abortion Care Guideline § 3.4.1.

Source document: WHO Abortion Care Guideline (page 103)

The recommended method for medical abortion is mifepristone followed by misoprostol (regimen differs by gestational age). Abortion Care Guideline § 3.4.2.

Source document: WHO Abortion Care Guideline (page 106)

The Abortion Care Guideline recommends the use of misoprostol alone, with a regime that differs by gestational age. Evidence demonstrates that the use of combination mifepristone plus misoprostol is more effective than misoprostol alone. Abortion Care Guideline § 3.4.2.

Source document: WHO Abortion Care Guideline (page 106)

WHO Guidance

Mifepristone and misoprostol should be listed in relevant national EMLs (NEMLs) or their equivalent and should be included in the relevant clinical care/service delivery guidelines.

Inclusion in the NEML is one important component of ensuring that quality medicines are available.

For induced abortion, Mifepristone (200 mg) and misoprostol (200 μg), are recommended in the WHO EML. The EML specifically mentions the following co-packaged formulation: 1 tablet mifepristone (200 mg) + 4 tablets misoprostol (200 μg).

Restrictions on prescribing authority for some categories of health workers may need to be modified or other mechanisms put in place to make the medicines available for these health workers within the regulatory framework of the health system. Abortion Care Guideline § 1.4.4.

Source document: WHO Abortion Care Guideline (page 55)

Mifepristone and misoprostol should be listed in relevant national EMLs (NEMLs) or their equivalent and should be included in the relevant clinical care/service delivery guidelines.

Source document: WHO Abortion Care Guideline (page 55)

Where it is lawful, abortion must be accessible in practice. This requires both ensuring that health-care facilities, commodities and services are accessible (including sufficient providers), and that law and policy on abortion is formulated, interpreted and applied in a way that is compatible with human rights. Abortion Care Guideline § 1.3.1.

Source document: WHO Abortion Care Guideline (page 48)

National standards and guidelines for abortion care should be evidence based and periodically updated and should provide the necessary guidance to achieve equal access to comprehensive abortion care. Leadership should also promote evidence-based SRH services according to these standards and guidelines. Abortion Care Guideline § 1.3.3.

---

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

The Abortion Care Guideline recommends the option of telemedicine as an alternative to in-person interactions with the health worker to deliver medical abortion services in whole or in part. Telemedicine services should include referrals (based on the woman’s location) for medicines (abortion and pain control medicines), any abortion care or post-abortion follow-up required (including for emergency care if needed), and for post-abortion contraceptive services. Abortion Care Guideline § 3.6.1.

**Source document:** WHO Abortion Care Guideline (page 133)

All contraceptive options may be considered after an abortion. For individuals undergoing surgical abortion and wishing to use contraception, Abortion Care Guideline recommends the option of initiating the contraception at the time of surgical abortion. For individuals undergoing medical abortion, for those who choose to use hormonal contraception, the Abortion Care Guideline suggests that they be given the option of starting hormonal contraception immediately after the first pill of the medical abortion regimen. For those who choose to have an IUD inserted, Abortion Care Guideline suggests IUD placement at the time that success of the abortion procedure is determined. Abortion Care Guideline § 3.5.4.

**Source document:** WHO Abortion Care Guideline (page 126)

Where user fees are charged for abortion, this should be based on careful consideration of ability to pay, and fee waivers should be available for those who are facing financial hardship and adolescent abortion seekers. As far as possible, abortion services and supplies should be mandated for coverage under insurance plans as inability to pay is not an acceptable reason to deny or delay abortion care. Furthermore, having transparent procedures in all health-care facilities can ensure that informal charges are not imposed by staff. Abortion Care Guideline § 1.4.2.

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

The Abortion Care Guideline recommends against regulation on who can provide and manage abortion that is inconsistent with WHO guidance. Abortion Care Guideline § 3.3.8.

Source document: WHO Abortion Care Guideline (page 97)

**Referral linkages to a higher-level facility**

- Not specified

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

There is no single recommended approach to providing abortion services. The choice of specific health worker(s) (from among the recommended options) or management by the individual themself, and the location of service provision (from among recommended options) will depend on the values and preferences of the woman, girl or other pregnant person, available resources, and the national and local context. A plurality of service-delivery approaches can co-exist within any given context. Given that service-delivery approaches can be diverse, it is important to ensure that for the individual seeking care, the range of service-delivery options taken together will provide access to scientifically accurate, understandable information at all stages; access to quality-assured medicines (including those for pain management); back-up referral support if desired or needed; linkages to an appropriate choice of contraceptive services for those who want post-abortion contraception. Best Practice Statement 49 on service delivery. Abortion Care Guideline § 3.6.1.

**Conscientious Objection**

**Public sector providers**

- No data found

**WHO Guidance**

The following descriptions were extracted from WHO Abortion Care Guideline. Where there is a specific Recommendation, this is stated. Otherwise, these are excerpts.

The Abortion Care Guideline recommends that access to and continuity of comprehensive abortion care be protected against barriers created by conscientious objection. It is critical that States ensure compliance with regulations and design/organize health systems to ensure access to and continuity of quality abortion care. If it proves impossible to regulate conscientious objection in a way that respects, protects and fulfills abortion seekers’ rights, conscientious objection in abortion provision may become indefensible. Abortion Care Guideline § 3.3.8.
